

Editorial for HIA Magazine Keystone Construction Software

A smarter way to produce quotes and variations

Is your quoting and variation process a laborious task? Could your business benefit from a leading software package that utilises Databuild's strengths to provide accurate, fast and professional estimates? Let us introduce you to Client Manager by Keystone Construction Software, a powerful platform that has been streamlining the quote and variation process in the construction industry for over eighteen years.

"Automating the quoting, revision and variation process, Client Manager gives us a detailed snapshot of costings and margins for each project, improving our productivity significantly." Peter Holt, Mimosa Homes

A proud business partner of Databuild

Seamlessly integrating with Databuild, Client Manager interfaces with Databuild's cost centre structure and pricelist, giving you unparalleled system transparency. Offering considerable improvement to the traditional method of documenting records, this technology exchanges up-to-date information, maximising efficiency while minimising errors and costs.

How does it work?

Client Manager utilises the Databuild Client List and incorporates modules for Quotations, Revisions, Pre-Contract Variations, Post-Contract Variations, along with Product and Colour Selections. Allowing you to produce a build-up for each client request, which is populated from the current Databuild Pricelist, all accepted line items can be used to update the Databuild Bill of Quantities. Simultaneously, all unaccepted line items are retained in the system for future reference.

From enquiry through to build, Client Manager offers a simplified quoting and variation solution for your business.
